FIREFOX™

A LASERVIDEO™ GAME

ATARI FIREFOX sets a new standard in laser disc entertainment.

- ATARI LASERVIDEO technology fully integrates laser disc and digital graphics for ultimate realism.
- Super-interactive game play offers player up to 128 path choices, making each flight a new adventure.
- Spectacular footage from the popular movie, Clint Eastwood's voice-over, and stereo sound effects expand the flying experience.
- New coin modes provide maximum profit potential.
- New headset jack with volume control enhances audio effects and individual listening enjoyment.
- New Philips laser disc player is specially designed to offer more reliability and continuous action.
- New "high-tech" cabinet designs maximize game attraction.

The player's role is to steal "the fastest, most sophisticated warplane on the face of this earth"—from Russia. Once airborne, there are two objectives: avoid Russian infra-red radar tracking systems, and find the refueling point. The player must also avoid or destroy MIG fighters and other FIREFOX prototypes.

Awareness of fuel level is crucial. The new "heads-up" graphic display functions as a cursor used to sight in on targets and displays fuel level and missile ammunition status.

FIREFOX offers more choices, more variety. The player chooses one of four escape flight paths during "level select." He is then faced with an ongoing series of challenges. Game play is determined solely by the player's responses to a wide variety of risk/reward situations.

High altitude flying uses less fuel but makes FIREFOX more vulnerable to detection. Low altitude flying uses more fuel but gives better cover. A direct hit by enemy aircraft also depletes fuel.

Controls

The ultra-responsive FIREFOX controller is the latest technological achievement in flight simulation.

Thumb buttons launch missiles, trigger switches fire bursts of cannon shells.

Special Effects

The strong game play is set against brilliant changing sky and landscapes from actual film footage. Ground shadows, cloud reflections, secret ground targets, helicopters, ships and instruction clips from the movie add to the extraordinary realism. At the higher levels, day turns to night and the player must rely only on the cursor to fly the ship.

Audio System

The audio reproduction system is the most sophisticated in the industry. The soundtrack includes dramatic stereo sound effects, Clint Eastwood's voice-over, and an original music score composed especially for the game that enhances the mood and pace of the action.

System Design

FIREFOX utilizes a new laser disc player co-designed with North American Philips to Atari specifications for industrial/commercial application. Designed for high reliability, the system gives extremely rapid access to "interleaved" video segments including fast jumping and no "dead spots."

Coin Modes

For 2 coins, players may select either a 3,000-mile or a 6,000-mile journey. For 3 coins, players may select a 9,000-mile journey or an "unlimited" journey.

Dimensions

Upright: Height: 68.5 in., 174 cm.; Width: 25.25 in., 64.1 cm.; Depth: 36 in., 91.4 cm.; Weight: 350 lbs., 158.8 kg.
Cockpit: Height: 59 in., 169.9 cm.; Width: 25.25 in., 64.1 cm.; Depth: 83 in., 210.8 cm.; Weight: 500 lbs., 226.8 kg.

FIREFOX blends space age technology and advancements to achieve what has never been achieved before. Flight test FIREFOX at your ATARI distributor.
